Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

and spontaneous recurrent abortion. The pharmaceutical composit comprising MASP-2 inhibitor is useful for treating inflammatory % \left( 1\right) =\left( 1\right) +\left( 1\right) +\left(
                                                                                                         treating infections caused by microbes such as fungus, yeast, retrovirus (e.g. human immunodeficiency virus (HTV)), or pathogenic bacteria which are resistant to at least one antibiotic medicament or multiresistant. The polynucleotide encoding MASP-2 is useful for treating patients deficient in MASP-2. The invention also discloses MASP-2 assays which are useful for determination of MASP-2 activity or levels in patients suffering from e.g. infections, inflammatory disorded the state of the suffering from e.g. infections, inflammatory disorded the suffering from e.g. infections.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     The invention relates to use of a polypeptide derived from mannan-binding lectin (MBL) associated serine protease-2 (MASP-2) for producing a pharmaceutical composition. MASP-2 is a complement-fixing enzyme and involved in lectin pathway of complement activation The pharmaceutical composition comprising MASP-2 is useful for the pharmaceutical composition comprising manner compris
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Use of a polypeptide comprising amino acid sequence derived from mannan-binding lectin associated serine protease-2 (MASP-2) for producing pharmaceutical composition, to treat bacterial, fungal

       The invention relates to isolated polynucleotide (I) and polypeptide (II) sequences. (I) is useful as hybridisation probes, polymerase chain reaction (PCR) primers, oligomers, and for chromosome and gene mapping, and in recombinant production of (II). The polynucleotides are also used in diagnostics as expressed sequence tags for identifying expressed genes. (I) is useful in gene therapy techniques to restore normal activity of (II) or to treat disease states involving (II). (II) is useful for generating antibodies against it, detecting or

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  a food supplement. (II) and its binding partners are useful in medical imaging of sites expressing (II). (I) and (II) are useful for treating disorders involving aberrant protein expression or biological activity. The polypeptide and polynucleotide sequences have applications in diagnostics, forensics, gene mapping, identification of mutations responsible for genetic disorders or other traits to assess biodiversity and to produce other types of data and products dependent on DNA and amino acid sequences. AAS64197-AAS9454 represent novel human diagnostic coding sequences of the invention.

Note: The sequence data for this patent did not appear in the printed specification, but was obtained in electronic format directly from WIPO as for a company terms of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 2375

                                The present invention provides human cDNAs, proteins and related g DNAs. These can be used in the treatment of neural, immune system, muscular, reproductive, gastrointestinal, pulmonary, cardiovascular renal and proliferative disorders and inflammation. The present se
                                                                                     Claim 1;

                                                                                                                                                     The present invention relates to the isolation of novel human calcium—binding proteins (AAU19892-AAU19999), and cDNA and genomic sequences encoding for these proteins. The sequences of the invention are useful in the diagnosis, prevention and/or prognosis of diseases associated with aberrant calcium flux. Such disorders include neurological diseases (e.g. amylotrophic lateral sclerosis, ALS), inmune dysfunction (e.g. severe combined immunodeficiency, SCID), indiseases (e.g. irritable bowel syndrome, IBS), neoplastic disease (e.g. cancer), blood disorders (e.g. haemophilia), and/or infectious disease (e.g. acquired immunodeficiency syndrome, AIDS). To novel calcium-binding proteins are also useful as screening tools to identify antagonists and/or agonists that may enhance or inhibit
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         17-NOV-

CC The invention describes an isolated nucleic acid molecule (1) encoding a CC novel central nervous system protein. (1) and polypeptides (III) encoded CC by (1), are used to treat a medical conditions and in diagnosis of a CC pathological condition. Disorders which are diagnosed or treated include autolumnume diseases e.g. rheumatold arthritis, hyperproliferative CC disorders e.g. neoplasms of the breast or liver, cardiovascular disorders CC e.g. cardiac arrest, cerebrovascular disorders e.g. cerebral ischaemia, CC angiogenesis, nervous system disorders e.g. Alzheimer's disease and CC amylotrophic lateral sclerosis, infections caused by bacteria, viruses CC e.g. Acquired immunodeficiency virus (AIDS) and fungi, ocular disorders CC e.g. corneal infection, gastrointestinal disorders e.g. dysphagia, CC adenocarcinomas and tirritable bowel syndrome, reproductive system CC disorders e.g. testicular feminisation, endocrine disorders e.g. diabetes and pituitary dwarfism, cancers and disorders at the cellular level e.g. CC respiratory disorders e.g. nonallergic rhinitis, renal disorders e.g. cardial cc respiratory disorders e.g. nonallergic rhinitis, renal disorders e.g. cardial cc respiratory disorders e.g. nonallergic rhinitis, renal disorders e.g. cardial cc respiratory disorders e.g. nonallergic rhinitis, renal disorders e.g. cardial cc respiratory disorders e.g. nonallergic rhinitis, renal disorders e.g. cardial cc respiratory disorders e.g. nonallergic rhinitis, renal disorders e.g. cardial cc respiratory disorders e.g. nonallergic rhinitis, renal disorders e.g. cardial cc respiratory disorders e.g. nonallergic rhinitis, renal disorders e.g. cardial cc respiratory disorders e.g. nonallergic rhinitis, renal disorders e.g. cardial cc respiratory disorders e.g. cardial continue of primary t.ssues, to regenerate tissues and in chemorlays cardial culture of primary t.ssues, to regenerate tissues and in chemorlays cardial c
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Claim 1; SEQ ID No 177; 837pp; English.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  New isolated nucleic acid encoding a protein for diagnosing, preventing, treating or ameliorating medical conditions and used food additives or preservatives -
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             (HUMA-) HUMAN GENOME SCI INC

        mRNAs encoding secreted proteins. An ORF has been identified within the sequence. The 5' ESTs were prepared from total human RNAs or polyA+ RNAs derived from 30 different tissues. EST sequences usually correspond mainly to the 3' untranslated region (UTR) of the mRNA because they are often obtained from oligo-dT primed cDNA libraries. Such ESTs are not well suited for isolating cDNA sequences derived from the 5' ends of mRNAs and even in those cases where longer cDNA sequences have been obtained, the full 5' UTR is rarely included. 5' ESTs are derived from mRNAs with intact 5' ends and can therefore be used to obtain full length cDNAs and genomic DNAs. 5' ESTs are also used in diagnostic, forensic, denote there are also used in diagnostic, forensic,

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Percent Similarity:
             mRNAs and even in those cases where longer cDNA sequences have been obtained, the full 5' UTR is rarely included. 5' ESTs are derived from mRNAs with intact 5' ends and can therefore be used to obtain full length cDNAs and genomic DNAs. 5' ESTs are also used in diagnostic, forensic, gene therapy and chromosome mapping procedures. They are used to obtain upstream regulatory sequences and to design expression and secretion
                                                                                                                              The present sequence is one of a large number of 5' ESTs derived from mRNAs encoding secreted proteins. An ORF has been identified within the sequence. The 5' ESTs were prepared from total human RNAs or polya+ RNAs derived from 30 different tissues. EST sequences usually correspond mainly to the 3' untranslated region (UTR) of the mRNA because they are often obtained from oligo-dT primed cDNA libraries. Such ESTs are not well suited for isolating cDNA sequences derived from the 5' ends of

These proteases can be administered in pharmaceutical compounds for the treatment of diseases or conditions associated with decreased expression of functional protease. Disorders which can be treated include gastrointestinal (peptic esophagitis, indigestion and gastritis), cardiovascular (hypertensive heart disease, myocardial infarction), autoimmune/inflammatory (rheumatoid arthritis), cell proliferative (arteriosclerosis, cancers), epithelial (eczema), neurological (Huntington's disease), and reproductive (endometriosis) disorders. The protein encoded by this sequence shows homology with the human precursor of P100 serine protease of Ra-reactive factor.

and directly activates complement system through binding to MBL. The MASP-3 polypeptides, polynucleotides and modulators are useful for preparing a pharmaceutical composition for treating aberrant MASP-3 activity such as infections, cancer, MBL-deficiency, disorders of the immune system and reproductive system. The MASP-3 polypeptide is also used for treating diseases associated with human immunodeficiency virus, multiple sclerosis, myasthenia gravis, epilepsy, rheumatoid arthritis, vasculitis, autoimmune hemolytic anemia, Crohn's disease, asthma, diabetes, psoriasis, multiple myeloma, atherosclerosis etc. It is also
                                                      inflammatory condition related to complement activation through MBL/MASP complexes. MASP-3 is also useful for treating an inflammatory condition resulting from an autoimmune condition after acute myocardial infarction or brain ischemia. It is also useful for treating an individual suffering from a disorder resulting from an imbalanced cytokine network. The present sequence represents a DNA encoding a human MASP-3 polypeptide.
                                                                                                                                                                                                                                 diabetes, psoriasis, multiple myeloma, atherosclerosis etc. It is all useful for inhibiting activation of C4 complement by inhibiting the pathway, inhibiting MASP-2 activity, inhibiting or treating an
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 polypeptides and polynucleotides encoding the protein, used for treating reoxygenated ischemic tissues, mannon-binding lectin deficiency, multiple sclerosis \,\cdot\,

They are also used for screening for a modulator of activity or of latency or predisposition to a PROX-associated disorder. AAF74432 to AAF74448 encode the specifically claimed human PROX polypeptides PRO1 to PRO17 given in AAB70531 to AAB70547.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          therapy, and as PROX antagonists and PROX agonists. PROX polypeptides, nucleic acids and antibodies are useful in the manufacture of a medicament for treating a syndrome associated with a PROX-associated disorder, e.g. a cell proliferation and/or differentiation disorder
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             The present invention describes isolated nucleic acids encoding secreted polypeptides, designated PROX polypeptides (i.e. a PRO polypeptide where X is an integer from 1 to 17). PROX polypeptides have cytostatic, immunomodulatory and reproduction activities, and can be used in gene
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Claim 8;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Nucleic acids encoding secreted polypeptides, designated PROX polypeptides, useful for treating a syndrome associated with PROX-associated disorder, e.g. cancer -
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Shimkets RA,

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          therapy, and as PROX antagonists and PROX agonists. PROX polypeptides, nucleic acids and antibodies are useful in the manufacture of a medicament for treating a syndrome associated with a PROX-associated disorder, e.g. a cell proliferation and/or differentiation disorder
                                                                                                    Human; PRO; PROX; cytostatic; immunomodulatory; reproduction; gene therapy; cell proliferation; differentiation disorder; carimmune associated disorder; gestational disease; pre-clampsia;
                                                                                                                                                                                                                                                                                                                            1504 TGTCACTGGCTGCTTGAGGCTCCTGAGGGCCCAGCGG 1539
                                                                                                                                                                                                                                                                                                                                                                                                                                                     Sequence 2127
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         The present invention describes isolated nucleic acids encoding secreted polypeptides, designated PROX polypeptides (i.e. a PRO polypeptide where X is an integer from 1 to 17). PROX polypeptides have cytostatic, immunomodulatory and reproduction activities, and can be used in gene
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Claim 8; Page 33-35; 166pp; English.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Nucleic acids encoding secreted polypeptides, designated PROX polypeptides, useful for treating a syndrome associated with a PROX-associated disorder, e.g. cancer -

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           The present invention describes isolated nucleic acids encoding secreted polypeptides, designated PROX polypeptides (i.e. a PRO polypeptide where X is an integer from 1 to 17). PROX polypeptides have cytostatic, immunomodulatory and reproduction activities, and can be used in gene therapy, and as PROX antagonists and PROX agonists. PROX polypeptides, nucleic acids and antibodies are useful in the manufacture of a medicament for treating a syndrome associated with a PROX-associated disorder, e.g. a cell proliferation and/or differentiation disorder
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       (e.g. cancer or immune associated disorders) and a gestational disease (e.g. pre-clampsia). They are also used for screening for a modulator of activity or of latency or predisposition to a PROX-associated disorder. AAF74432 to AAF74448 encode the specifically claimed human PROX polypeptides PRO1 to PRO17 given in AAB70531 to AAB70547.

                                                                                                                                                                                                                                                                                                                                                                                                                                               (e.g. cancer or immune associated disorders) and a gestational disease (e.g. pre-clampsia). They are also used for screening for a modulator of activity or of latency or predisposition to a PROX-associated disorder. AAF74432 to AAF74448 encode the specifically claimed human PROX polypeptides PRO1 to PRO17 given in AAB70531 to AAB70547.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           polypeptides, designated PROX polypeptides (i.e. a PRO polypeptide when X is an integer from 1 to 17). PROX polypeptides have cytostatic, immunomodulatory and reproduction activities, and can be used in gene therapy, and as PROX antagonists and PROX agonists. PROX polypeptides, nucleic acids and antibodies are useful in the manufacture of a medicament for treating a syndrome associated with a PROX-associated disorder, e.g. a cell proliferation and/or differentiation disorder
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Claim 8; Page 24-27; 166pp; English.

PROX polypeptides have cytostatic, immunomodulatory and reproduction activities, and can be used in gene therapy, and as PROX antagonists and PROX agonists. PROX polypeptides, nucleic acids and antibodies are useful in the manufacture of a medicament for treating a syndrome associated with a PROX-associated disorder, e.g. a cell proliferation and/or differentiation disorder.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         (e.g. pre-clampsia). They are also used for screening for a modulator of activity or of latency or predisposition to a PROX-associated disorder. AAF74432 to AAF74448 encode the specifically claimed human PROX polypeptides PRO1 to PRO17 given in AAB70531 to AAB70547.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Claim 8; Page 28-31; 166pp; English.

                                                                                                                                                                                                                                          The invention relates to forty four human secreted proteins (referred to SECP-14) and the nucleic acids encoding them. Also included are a host cell transformed with the nucleic acid, a transgenic enimal comprising the nucleic acid, an anti-SECP antibody, use of the SECP proteins in isolating agonists and antagonists of SECP activity and a method of isolating compounds which alter the expression of the SECP nucleic acid. The SECP polynucleotides and CC polypeptides are useful in the diagnosis, treatment and prevention of CC cardiovascular (e.g. atherosclerosis, hypertension, myocardial CC infarction), autoimmune/inflammatory (e.g. acquired immunodeficiency syndrome (AIDS), allergies, rheumatoid arthritis), cell proliferative CC (e.g. cancer), developmental (e.g. Duchenne and Becker muscular CC disorders, Numerous other examples of each disorder are given in the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         20-JUN-2000; 2000US-212890P.

SEZ6 is useful for treating a patient suffering from a neurological disorder such as epilepsy, Alzhelmer's disease, Parkinson's disease, seizure related disorder or a disorder associated with stroke. SEZ6 DNA is useful as probes for gene mapping and for detecting transcription, translation and/or expression of hSEZ6 polypeptide in human tissue. A transgenic animal is useful as an animal model in research and drug development procedures, and for testing compounds or other treatment modalities which may prevent, suppress or cure a pathology or disease associated with hSEZ6 activities. SEZ6 is also useful for treating abnormal primary or secondary sexual development, e.g., impotence, infertility or reduced libido. The hSEZ6 polynucleotide

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                capable of detecting 1000 or more genes from Drosophila. The invention useful in developmental biology and in elucidating cell signalling and cell-cell interactions in higher eukaryotes for the development of insecticides, therapeutics and pharmaceutical drugs. The invention discloses genomic DNA sequences (ABL16176-ABL30511), expressed DNA sequences (ABL101840-ABL16175) and the encoded proteins
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         New isolated nucleic acid genes from Drosophila and interactions -
          New isolated nucleic acid detection reagent for detecting 1000 or more genes from Drosophila and for elucidating cell signalling and cell-cel
                                                                                                                                                    23-MAR-2000; 2000US-191637P

Claim

1; SEQ ID NO 25328; 21pp + Sequence Listing; English

The invention relates to an isolated nucleic acid detection reagent capable of detecting 1000 or more genes from Drosophila. The invention useful in developmental biology and in elucidating cell signalling and cell-cell interactions in higher eukaryotes for the development of insecticides, therapeutics and pharmaceutical drugs. The invention discloses genomic DNA sequences (ABLIGI76-ABL30511), expressed DNA sequences (ABLIGI76-ABL30511), expressed DNA sequences (ABLIGI76) and the encoded proteins

changes in gene expression and for identifying toxicity markers in tissues or cell exposed to a known toxin. The genes may be used as toxicity markers in drug screening and toxicity assays. The genes and gene expression information may be used as diagnostic markers for the prediction or identification of the physiological state of tissue or cell sample that has been exposed to a compound or agent. Hepatotoxicity is characterised by centrilobular necrosis and steatosis. The present sequence is an expressed sequence tag (EST) or cDNA derived from a gene The method can also be used to identify an agent which modulates the toxic response and predict cellular pathways that a compound modulates in a cell. The methods utilise a set of at least two probes (on a solid support in kit form), where each of the probes comprises a sequence that specifically hybridises to a gene listed in the specification, a computer system comprising a database containing information identifying the expression level in a tissue or cell sample exposed to a hepatotoxin of a set of genes comprising at least two genes listed in the specification, and a user interface to view the information used to present information identifying the expression level in a tissue or cell of at least one gene listed in the specification. The method is useful for elucidating global expression in a tissue or cell sample exposed to the compound of two omore genes listed in the specification, where differential expression the genes is indicative of at least one toxic effect or progression. cells. Also included are methods of predicting at least one toxic effect of a compound or progression of a toxic effect, preferably the hepatotoxicity of a compound, comprising detecting the level of effects by determining the changes in gene expression in tissues or cells exposed to the toxin and comparing these to gene expression in unexposed tissues or cells global changes in gene expression in tissues or cells exposed to the toxin and comparing these to gene expression in unexposed tissues or sequence is an expressed sequence tag (EST) or cDNA derived from a gewhich is differentially expressed in response to a hepatotoxic agent. compounds or the progression of these The invention relates to methods for predicting toxic effects D No 1712; 239pp; English. toxic effects by determining of two or the
